

University of Agronomic Sciences and Veterinary Medicine of Bucharest, Romania

University of Agronomic Sciences and Veterinary Medicine of Bucharest (USAMV) is the oldest and largest institution of higher agronomic education in Romania, founded in 1852, where the tradition and modernity successfully meet.

The university provides BSc, MSc and PhD education and scientific research activities in order to train top specialists whose competences meet the demands of the labor market in the fundamental fields of "Engineering Sciences" and "Biological and biomedical sciences".

USAMV offers students both the necessary adequate infrastructure for education and research, fully equipped laboratories and scientific research stations, and great opportunities for spending their free time in the university.

Currently, the university consists of 7 faculties (Agriculture; Horticulture; Animal Productions Engineering and Management; Veterinary Medicine; Land Reclamation and Environmental Engineering; Biotechnologies; Management, Faculty of Management and Rural Development) and 2 branches (in Călărași and Slatina), comprising 12,000 enrolled students, and multidisciplinary research laboratories as well as a greenhouse, all designed to European standards, providing competitiveness both at national and international level.

Thanks to OENOVITI International we already had the opportunity to visit several partner countries and learn from the best experts, we aspire to also develop common research projects

Arina Oana ANTOCE,
Professor of Oenology

"Oenoviti network provided us with plenty of opportunities for collaboration and participation in projects. So far, along with other important universities, also members of Oenoviti network, we have been partners in two Erasmus projects (OENOBIO Strategic Partnerships). We were present at several General Assemblies held off-line and lately on-line, in different countries, learning more about the research topics and education particularities of other members. Most importantly, the scientific Symposiums organized by the Oenoviti network brought us up to date with the most recent information in the field and offered opportunities to exchange views and to get new ideas for research. Oenoviti network is now the largest international network in the field of viticulture and oenology and being part of it offers better visibility to its members and access to the vast expertise and knowledge in science, research and technology provided by the partners of the network. In my opinion, to be a member of such a relevant network is essential and quite useful for any institution or organization from our field of work."
